The zcytor17 CC proteins are useful for treating and diagnosing lymphoid, immune, CC inflammatory, spleenic, blood or bone disorders. Agonists or anti-ccytori7 antibodies are useful in stimulating cell-mediated immunity and CC zcytori7 antibodies are useful in stimulating cell-mediated immunity and CC infections involving immunosuppression, including certain viral CC infections. They are also useful for inducting cytotoxicity and for treating autoimmune diseases (e.g. rheumatoid arthritis and multiple sclerosis), inflammatory diseases (e.g. Crohn's disease), cancer, CC pancreatitis, and inflammatory bowel disease. Zcytor17 was mapped to CC chromosome 5, specifically to the 5q1 chromosomal region, ABA33767 to ABA93843 and ABB05730 to ABB05745 represent sequences used in the cytory was mapped to chashally in the present invention

                                                                                                                                                                                                                                                                                                                            The invention relates to a novel isolated zcytor17 ligand polypeptide. A polypeptide of the invention has antiinflammatory, dermatological, immunosuppressive, and antimicrobial activity, and may have a use in a vaccine. The polypeptide is useful for treating inflammatory diseases, such as inflammatory bowel disease, ulcerative colitis, Crohn's disease, atopic dermatitis, ezzema, psoriasis, endotoxaemia, septicaemia, toxic shock syndrome or infectious diseases. The present sequence is used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New zcytor17 ligand polypeptides, useful for treating inflammatory diseases, such as inflammatory bowel disease, ulcerative colitis, Crohn disease, atopic dermatitis, eczema, psoriasis, endotoxemia, septicemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2003-618179/58.

The invention describes an isolated multimeric or heterodimeric cytokine receptor (I) having at least one polypeptide having 90 percent sequence CC identity with a 732 (S1) or 649 (S2) amino acid sequence given in Specification, and where (I) binds a ligand comprising a 164 (S3) amino CC acid sequence, given in specification, or at least one polypeptide CC comprising residue 20-227 of (S1). (I) is useful for killing cancer cells CC and producing an antibody to (I) and a cytokine-binding domain of a class CC binding domain of a class I cytokine-binding domain of a class CC binding domain of a class I cytokine receptor and a vehicle is useful for reducing haematopoietic cells and hematopoietic progenitor cells in a mammal; inhibiting zcytor171ig-induced proliferation or differentiation CC inflammatory disease in which zcytor171ig amammal afflicted with an inflammatory disease in which zcytor171ig pays a role. The disease, CC ulcerative colitis, Crohn's disease, atopic dermatitis, eczema and CC underative colitis, Crohn's disease, atopic dermatitis, eczema and CC phoriasis. The disease is acute inflammatory disease such as inflammatory disease such as cimune response inhibiting composition is useful for inhibiting an inflammatory response inhibiting composition is useful for suppressing an inflammatory response inhibiting composition is useful for suppressing an inflammatory response in a mammal exposed to an antigen or pathogen. An outlinearic or heterodimeric cytokine receptor in a biological sample. This sequence encodes a soluble human zcytor17-human Fc4 (not defined)

The present invention relates to human and murine haematopoietin receptor CC polypeptides HPR1 and HPR2. Sequences of the invention are useful for treating cell proliferation conditions e.g., pancytopaenia, leukopaenia, CC anaemia, thrombocytopaenia, neurodegenerative disorders and osteoporosis CC resulting from a lack of bone-forming cells. They are also useful for treating cell proliferation conditions such as leukaemia and tumour CC metastasis, osteoporosis resulting from an excess of bone-resorbing CC diseases such as cell proliferation, metabolic and reproductive hormone CC diseases such as cell proliferation, metabolic and reproductive hormone CC diseases such as cell proliferation, metabolic and reproductive hormone CC carcinoma, myelogenous leukaemia, colon, stomach, prostate, renal cell, CC carcinoma, myelogenous leukaemia, colon, stomach, prostate, renal cell, CC carcinoma, myelogenous leukaemia, colon, stomach, prostate, renal cell, CC carcinoma, carcinoma (e.g., adenocarcinoma (E.g., osteosarcoma, sarcoma), carcinoma (e.g., adenocarcinoma (E.g., osteosarcoma, concer-associated cachexia, fatigue, solid tumours (e.g., osteosarcoma, CC squamous cell carcinoma), haematologic disorders, anaemias (e.g., anaemia cod displastic syndromes (including refractory anaemia, refractory anaemia, color purpura (ITP), sickle cell vasocclusive crisis, myelofibrosis/
CC myeloid metaplasia, osteoclast disorders that lead to bone loss such as cortactory including content of the monocrotaci including content cancer should be propored to content the content of the co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        06-OCT-2000; 2000US-0238706P

                                                          US-10-006-265-4 (1-252)
                                                                                                                                                                                                                            CC Zcytor17 has immunomodulatory, antiinflammatory, antiviral, cytostatic, CC antixheumatic, antiarthritic and muscular activities. The zcytor17 CC proteins are useful for treating and diagnosing lymphoid, immune, CC inflammatory, spleenic, blood or bone disorders. Agonists or anti-ccytor17 antibodies are useful in stimulating cell-mediated immunety and CC for stimulating lymphocyte proliferation, such as in the treatment of cifections involving immunosuppression, including certain viral CC infections. They are also useful for inducting cytotoxicity and for creating leukopenias. Antagonist of zcytor17 polypeptides are useful for treating autoimmune diseases (e.g. rheumatorid arthritis and multiple sclerosis), inflammatory diseases (e.g. Crohn's disease), cancer, CC pancreatitis, and inflammatory bowel disease. Zcytor17 was mapped to Chromosome 5, specifically to the 5q11 chromosomal region. ABA93767 to ABA93843 and ABB05730 to ABB05745 represent sequences used in the CX exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 26-JUN-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel isolated zcytor17 ligand polypeptide. A polypeptide of the invention has antiinflammatory, dermatological, immunosuppressive, and antimicrobial activity, and may have a use in a vaccine. The polypeptide is useful for treating inflammatory diseases, such as inflammatory bowel disease, ulcerative colitis, Crohn's disease, atopic dermatitis, eczema, psoriasis, endotoxaemia, septicaemia, toxic shock syndrome or infectious diseases. The present sequence is used in

(I) is useful for killing cancer cells and producing an antibody to (I) and a cytokine-binding domain of a class CC injudy domain of a class I cytokine receptor and a vehicle is useful for: reducing haematopoietic cells and hematopoietic progenitor cells in a mammal; inhibiting zcytor171ig-induced proliferation or differentiation. CC of hematopoietic cells and hematopoietic progenitor cells; reducing CC zcytor17lig-induced inflammation; treating a mammal afflicted with an CC inflammatory disease in which zcytor17lig plays a role. The disease is a cronic inflammatory disease such as inflammatory bowel disease is a cronic inflammatory disease such as inflammatory bowel disease. CC uncerative colitis, Crohn's disease, atopic dermatitis, eczema and CC psoriasis. The disease is a cute inflammatory disease such as expected as inflammatory bowel disease. An immune response in a mammal exposed to an antigen or pathogen, An composition is useful for suppressing an inflammatory response in a mammal exposed to an antigen or pathogen. An antibody that Specifically binds to (I) is useful for detecting the presence of a cc multimeric or heterodimeric cytokine receptor in a biological sample. This sequence encodes a human zcytor17 cytokine receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-10-006-265-4 (1-252) x ADL26569

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5
                                                                                                                The present sequence encodes a human haemopoietin receptor protein (NR10), specifically designated NR10.1. NR10 occurs as a transmembrane protein and a soluble protein. NR10 is a haemopoietin receptor molecule which participates in immunoregulation and haematopoietic cell regulation in vivo, and is useful in searching for haematopoietic factors capable of binding to the receptor. NR10 can be used for the identification of substances for the treatment and prevention of immune and haematopoietic disorders including autoimmune diseases and allergies such as metal and called a light of the control of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 200

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a cytokine receptor designated zcytor17. CC Zcytor17 has immunomodulatory, antiinflammatory, antivital, cytostatic, cantirheumatic, antiarthritic and muscular activities. The zcytor17 cc antirheumatic, antiarthritic and muscular activities. The zcytor17 cc proteins are useful for treating and diagnosing lymphoid, immune, inflammatory, spleenic, blood or bone disorders. Agonists or anticzytor17 antibodies are useful in stimulating cell-mediated immunity and crytor17 antibodies are useful in stimulating cell-mediated immunity and crytor17 antibodies are useful in the treatment of infections involving immunosuppression, including certain viral crimetrions. They are also useful for inducting cytotoxicity and for treating leukopenias. Antagonist of zcytor17 polypeptides are useful for treating autoimmune diseases (e.g. rheumatoid arthritis and multiple treating autoimmune diseases (e.g. rheumatoid arthritis and multiple sclerosis), inflammatory diseases (e.g. Crohn's disease), cancer, cpancreatitis, and inflammatory bowel disease. Zcytor17 was mapped to chromosome 5, specifically to the 5q11 chromosomal region. ABA93767 to ABA93843 and ABB05730 to ABB05745 represent sequences used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated polynucleotide encoding a useful for treating and diagnosing spleenic, blood or bone disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            26-JUN-2000; 2000US-0214282P.

Novel multimeric or heterodimeric cytokine receptors useful for treating chronic inflammatory disease such as inflammatory bowel disease, ulcerative colitis, acute inflammatory disease such as endotoxemia,

Disclosure; SEQ ID NO 112; 205pp; English

CC receptor (I) having at least one polypeptide having 90 percent sequence CC identity with a 732 (SI) or 649 (S2) amino acid sequence given in Specification, and where (I) binds a ligand comprising a 164 (S3) amino CC acid sequence, given in specification, or at least one polypeptide comprising residue 20-227 of (SI). (I) is useful for killing cancer cells CC and producing an antibody to (I) and a cytokine-binding domain of a class I cytokine receptor. A composition (CI) comprising (I) and a cytokine-binding domain of a class I cytokine receptor and a vehicle is useful for: reducing haematopoietic cells and hematopoietic progenitor cells in CC a mammal; inhibiting zcytor1711g-induced proliferation or differentiation confident of inflammatory disease in which zcytor171ig plays a role. The disease is a chronic inflammatory disease such as inflammatory bowel disease is a chronic inflammatory disease, atopic dematities, eczema and CC endotoxaemia, septicaemia, toxic shock syndrome and infectious disease. An immune response in hibiting composition is useful for suppressing an imflammatory response in a mammal exposed to an antigen or pathogen. An imflammatory response in a mammal axion inflammation. An antibody that composition by the presence of a comprisically binds to (I) is useful for detecting the presence of a comprisically binds to (I) is useful for detecting the presence of a comparison with other receptor in a biological sample. The invention describes comparison with other zcytor17 receptors. an isolated multimeric or heterodimeric cytokine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Zcytor17; chromosome 5; 5q11; cytokine receptor; immunomodulatory; antiinflammatory; antiviral; antirheumatic; antiarchritic; cytostatic; muscular; lymphoid; immune; inflammatory; spleenic; blood; bone; infection; immunosuppression; cytotoxicity; leukopenia; Crohn's disease; autoimmune disease; rheumatoid arthritis; multiple sclerosis; cancer; inflammatory disease; pancreatitis; inflammatory bowel disease; ss.
The present invention describes a cytokine receptor designated zcytor17. Zcytor17 has immunomodulatory, antiinflammatory, antiviral, cytostatic, antirheumatic, antiarthritic and muscular activities. The zcytor17 proteins are useful for treating and diagnosing lymphoid, immune, inflammatory, spleenic, blood or bone disorders Agonists or antizcytor17 antibodies are useful in stimulating cell-mediated immunity and for stimulating lymphocyte proliferation, such as in the treatment of infections involving immunosuppression, including certain viral
                                                                                                                                                                                                                                                                                               Isolated polynucleotide encoding a useful for treating and diagnosing spleenic, blood or bone disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        26-JUN-2000; 2000US-0214282P.

They are also useful for inducting cytotoxicity and for treating leukopenias. Antagonist of zcytor17 polypeptides are useful treating autoimmune diseases (e.g. rheumatoid arthritis and multiple sclerosis), inflammatory diseases (e.g. Crohn's disease), cancer, pancreatitis, and inflammatory bowel disease. Zcytor17 was mapped to chromosome 5, specifically to the 5q11 chromosoma region. ABA93767 t ABA93843 and ABB05730 to ABB05745 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2386
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           No.:
